

INVEST IN AMERICA ACT RESILIENCE

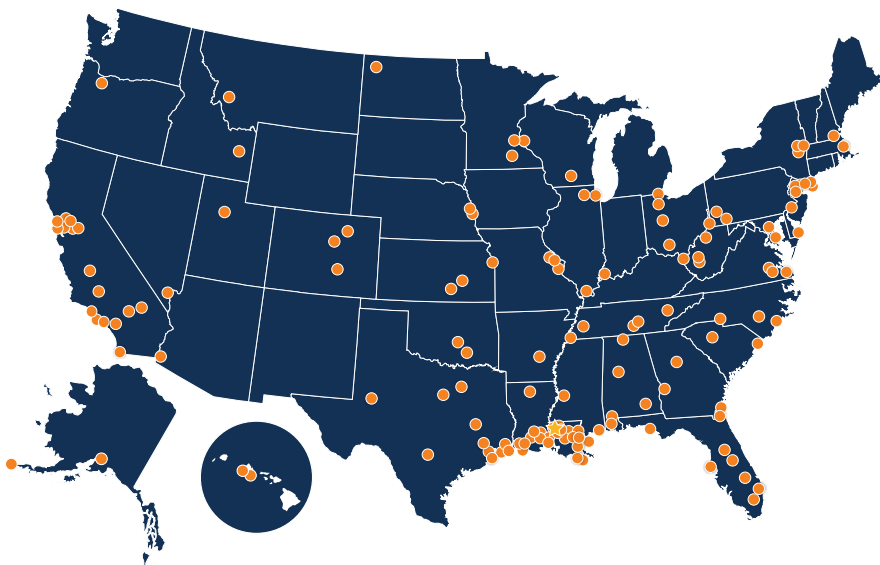

APTIM UNDERSTANDS LEGISLATION

APTIM is at the ready to assist with navigating our clients through one of the largest infrastructure packages in U.S. history. We are committed to enhancing critical infrastructure for our natural and built environment, building the frameworks that allow for a more resilient infrastructure network, and making a vital difference in our communities.

APTIM's process allows clients to focus on available funding streams for current and future projects. Together, with our in-house funding specialists with experience in accessing grant and loan funding sources, we are well positioned to assist our clients with the funding available to them through this unprecedented Infrastructure Bill. APTIM's experts:

- ▶ Interpret mechanisms for funding
- ▶ Precisely execute capturing funding and applying to project needs
- ▶ Assist our clients with crafting resilient and sustainable communities

RESILIENCE

Being prepared for tomorrow, today. Adapting and managing the unknown in today's rapidly changing world. Dealing with climate change issues that were not foreseen by the infrastructure designs of the past. All these, take knowledge, collaboration, trust, and a team that can deliver extraordinary outcomes.

COLLABORATION

At APTIM, our subject matter experts apply their passion to the challenges that face our clients and communities to craft resilient solutions. Addressing all aspects of the resilience cycle from proper planning and preparation, designing solutions, responding when disaster strikes, managing the recovery, and developing adaption strategies for a faster recovery from future disasters, the APTIM team is here for you.

COMPREHENSIVE APPROACH

Resilience requires multi-disciplinary, and multi-layered approaches understanding interconnected systems. APTIM's experience in each element of the cycle helps to inform and improve the others. Experience responding to disasters by providing boots on the ground through debris removal logistics, temporary shelter, and energy power helps to inform the funding needs for recovery and the planning and design needed for a lower cost and more rapid return to normalcy.

APTIM's comprehensive layered systems approach helps clients and communities identify and prioritize critical assets, assess the vulnerability, criticality, and risk to help prioritize capital programs and implementation in an order to protect those assets most effectively. APTIM assists clients with identifying private and public funding and managing grants to offset their resiliency efforts.

APTIM RESILIENCY & RECOVERY MODEL

TRUSTED PARTNERSHIP

APTIM provides exceptional expertise in program management, grants management, coastal engineering, science, and restoration, ports, flood control engineering, disaster response services, and recovery. APTIM will be there at your side working collaboratively crafting resilient solutions that balance physical risk reduction, environmental, and social needs.
