

INFRASTRUCTURE INVESTMENT AND JOBS ACT

RESILIENCY FOR PORTS AND HARBORS

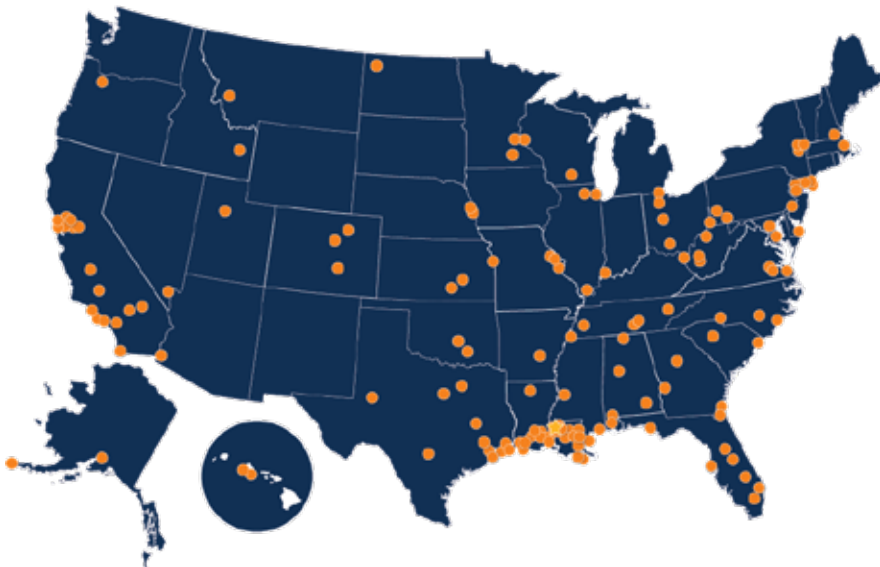

APTIM UNDERSTANDS LEGISLATION

APTIM is at the ready to assist with navigating our clients through one of the largest infrastructure packages in U.S. history. We are committed to enhancing critical infrastructure for our natural and built environment, building the frameworks that allow for a more resilient infrastructure network, and making a vital difference in our communities.

APTIM's process allows clients to focus on available funding streams for current and future projects. Together, with our in-house funding specialists with experience in accessing grant and loan funding sources, we are well positioned to assist our clients with the funding available to them through this unprecedented Infrastructure Bill. APTIM's experts:

- ▶ Interpret mechanisms for funding
- ▶ Precisely execute capturing funding and applying to project needs
- ▶ Assist our clients with crafting resilient and sustainable communities

- ▶ **372** Engineers
- ▶ **151** Professional Engineers
- ▶ **90+** Program Managers
- ▶ **230** Project Managers
- ▶ **30+** Grant/Funding Specialists

RESILIENCY FOR PORTS AND HARBORS

For ports and harbors, water level extremes, long-term sea level changes, shoaling, and frequency of intense storms are present ongoing environmental hazards. In addition, aging infrastructure, port congestion, intermodal connections, emergency response capabilities, and budgets also challenge resiliency.

APTIM, an award-winning nationally recognized leader in disaster recovery, coastal engineering, flood mitigation, and program management, has taken a holistic approach to developing and maintaining resiliency for ports and harbors.

As part of our holistic approach, APTIM conducts vulnerability assessments and develops resiliency plans and designs both for new infrastructure and upgrades, emergency response plans, continuity of operations plans, and post-disaster recovery plans. We help clients effectively weave resilience into all aspects of the port and its operations at all stages.

For decades, the grant management professionals of APTIM have helped ports and harbors identify funding for capital improvement programs that improve resiliency and for disaster recovery efforts. Our detailed grant management approach is based on:

- ▶ Mastery of the financial management associated with federal funds
- ▶ Expertise in federal government's documentation requirements for funding
- ▶ Proactive approach in capturing multiple funding streams for our clients' needs
- ▶ Understanding how to make our clients more resilient

With thousands of employees in strategic locations nationwide, we have established a strong reputation of providing the extensive resources needed to assist you in the preparedness, response, recovery, and mitigation from all hazards.

NAVIGATING RESILIENCY AND RECOVERY FUNDING FOR PORTS AND HARBORS

Ports are key to the economic health of surrounding coastal communities and beyond, and APTIM helps ports develop and maintain resiliency through grant management. APTIM assists the Port Authority of New York and New Jersey in obtaining funding for post-Sandy recovery and COVID-19 relief. Our experts provide specialized knowledge of the intricate details of federal agencies' requirements to ensure accessibility of eligible funding while avoiding duplication of benefits. As a result, we have helped the Port Authority develop and maintain resiliency using funding from FEMA, the Federal Aviation Administration (FAA), the Federal Transportation Administration (FTA), the Department of Transportation (DOT), and the Federal Highway Administration (FHWA).
