

SOLID WASTE DRILLING SERVICES

With more than 30 years of solid waste experience, APTIM acquired a nationwide reputation as a leader in landfill drilling with a wide range of services and specialized drilling equipment. We are one of the industry's leading landfill gas (LFG) construction contractors. We complete LFG system design/build projects including equipment supply to well drilling, and gas recovery system installation.

DRILLING QUALIFICATIONS

We have the equipment, personnel, and vast experience to complete LFG/gas drilling projects in the most difficult conditions. We handle wells with high leachate levels or perched leachate in a safe and professional manner. Our staff developed improved drilling methods for vertical gas extraction wells. We come equipped with state-of-the-art drilling equipment and can provide a variety of drilling services.

- ▶ Bucket-style rotary bits optimize the removal of cap and waste during drilling operations
- ▶ Sludge buckets get through perched layers of sludge and back into good trash
- ▶ Non-slip, pull down systems allow penetration through more difficult down hole conditions (normally encountered in landfill) and well abandonment minimization
- ▶ Veteran staff leads our drilling services with extensive construction background
