Small business loans can be used for most business purposes:

Obtaining a business loan can mean the difference between success and failure for most small businesses. So, what do you need to do to find the right small business loan and get approval?

Sorting through all of the different types of small business loans (and their associated funding sources) is actually the easy part. You can browse through the table below and select the funding type that best fits your needs. You can also click on the search link to match your business to more than 4,000 different funding sources.

However, keep in mind that getting approval requires an incredible attention to detail. Each loan provider will have slightly different criteria that you'll have to fulfill before you can be approved. You can use our free search service to track down business lenders, but before you apply make sure you ask each lender about their approval criteria. Then make sure that you and your business meet the criteria before you allow the lender to do their checks.

“AdIQity has launched AppNow, a product that provides solution to leverage on the current mobile trends.”

(1888PressRelease) August 02, 2013 - AdIQity launches its latest product "AppNow", a one click free solution to convert any WAP site into an Android app. Mobile site publishers can now conveniently create app version of their content using the AppNow solution. This will enable mobile users to download and install the app to watch or read the same content as on the wap sites.

"AppNow will allow wap site content to be available on Android app without any effort or cost. It is a golden opportunity for mobile site publishers to attract new users and broaden their overall user base. The highlight being that one can generate additional revenue with the app without investing resources." said Anurag Dod, Founder & CEO, AdIQity.

The created app can be uploaded on Google Play Store or any other desired app store by the mobile site owners where it can be easily found and downloaded by mobile users. Mobile users are preferring apps over wap sites due to multiple app advantages like ease of access and in this case, it also relieves them from the task of remembering site URL's.
