Always Be Safe! How You can Be Safe!

By Makenzie - Grade 6

Safety Tips When Working Somewhere That Is Dangerous

- We should help stop people from tripping and falling in the workshop.
- We should wipe up spills right away and store tools properly to stop trips and falls.
- Put on hard hats, gloves, safety glasses, or high-visibility vests as required for your job.
- Check machinery, fire extinguishers, and emergency kits before use.
- Rest your eyes and stretch to avoid fatigue, which causes errors similar to impairment.
- Never skip safety steps or remove machine guards just to finish a task faster.

Safety Tips When Dealing With A Dangerous Fire:

If a fire ever comes in a family's home you need everyone to get out fast. Stay to the floor because we don't want anyone to breathe in smoke. You need everyone to cover their mouth with their clothes and use stop, drop, and roll if anyone's clothes catch on fire. I know that everyone will be scared but nobody should hide, that's how they might get in more danger. You should teach your kids to if there door handle is hot never to open their door there is fire on the other side of it. If you are trapped on a room make sure to open your window you try to get some smoke out then wave your hand out the window.

Safety Tips For Riding Your Bike:

You can have fun riding a bike and still be safe; here are some tips:

1. Wear a helmet.
2. If you are just starting to learn, make sure you wear protective gear.
3. If you want to bike somewhere that your parents can't see you, you should have a phone so your parent knows where you are and if you don't have a phone, take your parent with you or be with a old sibling or friend.
4. Bike on the sidewalk not on the road because if you are alone someone could run over you if you are not careful.
5. Remember to take care of your bike and give it the proper maintenance so it doesn't fall apart and is reliable.
